

The Flyline is a cablecam system. And this by using two ropes, 1 to ride on and 1 as the safety. The Flyline does not require heavy winches. The Flyline makes use of a DC motor on the trolley along the cable. The power is provided by on-board lithium-polymer batteries. It is possible to reach speeds up to 45 mph (65kph). The maximum rope length is 470m at the moment.

For Flyline we also have a stabilized head, the Shotover G1. So you can still, at high speeds, make the most out of the zoom. More information about this head can be found [here](#).

SPECS

Max Payload (Head + Camera)	25 kg (55.11 lbs)
Max Speed	65 km/h (40 mph)
Max Traveling Length	470 m (1542 ft)
Power Requirement	48 V
Power Supply	Battery
Motion Control	No
Weather Proof	Yes
Communication	Wireless
Joystick Control	Yes
Pedal Control	No
End Stops	No

Remote Head Mounting Base	Custom
